

Abstract

At a time when devices are ruling the contemporary educational arena, while educators have conquered the expertise and the necessary know-how, in order to move on to the next step of digital transformation of schools, it is mandatory for a revolutionary pedagogical approach to emerge. The search for such an approach led us to the One-to-One Learning Model. For those who are not familiar with the term, it refers to an educational environment where each participant (student or teacher) owns a device that meets specific technical requirements and provides interconnectivity between teachers, students and utilizes other O365 tools, including OneDrive and collaborating platforms such as Microsoft Teams. Via this pioneering program, our central aim was to design a suitable hybrid learning model, to increase student engagement, accelerate learning, foster global competencies, and meet diverse students' needs.
